EXECUTIVE SUMMARY

Nowadays, the movement of change is getting very fast as well as the modernization which affects the life of individuals. On the whole, android devices are the wonderful gadgets that we have changed the lives of human beings. This paper proposes a system that could help a specific establishment which is Android-Based E-Learning Application for Criminology Students that make the board exam easier and more convenient.

An Android-Based E-Learning Application for Criminology Student is an Android based reporting that serve as the update version of the existing system. This kind of system is a specialized system that could help Criminology students for their board exam. Utilizing the system could help and enjoy them while reviewing. This is suitable for accessing of data easily.

The study generally aimed to design and develop a android system for the criminology students of San Jose Campus. It specifically aimed to identify the system requirements in developing the system, design and develop the different functionalities of the system.

The result shows that the respondents was 20 with the functionality and usability of the system gaining the grand mean of 4 5during the testing so the researchers concluded the system as 4.2. Furthermore, future researchers may conduct similar study by adding some features, improving system designs and functions for farther enhancement of the system.
